

INSTRUCTIONS FOR USE

This leaflet is intended to inform users of SILSOFT® hydrophilic Contact Lenses how to wear and care for their lenses.

It applies to:

PRODUCT NAME	MATERIAL	WATER CONTENT	PACKAGING SOLUTION
SILSOFT® (elastofilcon A) Contact Lenses	Elastofilcon A	0.2% by weight	Sterile Purified Water

Description and wear application

SILSOFT® Contact Lenses are designed for aphakic patients for daily wear or extended wear with a replacement period as prescribed by the eye care professional up to a maximum of 30 days between removals for cleaning and disinfection.

Supplemental spectacles may be required for aphakic persons in some conditions to provide near vision or to compensate for uncorrected astigmatism.

When reusing lenses they must be cleaned, rinsed and disinfected between removal and reinsertion. Always follow your eye care practitioner's recommended wear schedule and replacement periods.

These lenses are supplied sterile and are intended by the manufacturer for reuse for up to 30 days. They have been sterilized by steam.

If the packaging is damaged or opened DO NOT USE.

Insertion and removal instructions

Before handling lenses, always wash and dry hands thoroughly avoiding perfumed or medicated soaps. Pour the lens into the palm of your hand. Make sure the lens is the right way out.

Inspect your lens before inserting and do not insert if scratched or damaged.

To remove your lens, make sure your hands are clean and dry, use your finger to slide the lens down to the white part of the eye and remove it. Use a rewetting drop if the lens is difficult to remove.

Caring for your lenses

- Cleaning and disinfecting your lenses between uses is essential for healthy eyes
- Use only soft contact lens care products following the manufacturer's instructions
- Always use fresh, unexpired lens care solutions
- Do not use other solutions such as tap or bottled water or saliva to rinse, store or re-wet lenses
- Always keep lenses completely immersed in the recommended solution when not being worn
- Remember to clean your lens case whenever you clean your lenses
- Always discard lenses at the end of the wear schedule prescribed by your eye care practitioner
- Always wash and rinse hands before handling lenses
- Do not allow cosmetics, lotions, soaps, creams or perfumed substances to get in the eyes or on lenses
- Never use sharp objects or finger nails to remove lenses from their containers or your eyes

Warnings and precautions

Failure to follow your eye care practitioner's recommended wear schedule and cleaning regimen can give rise to greater risk of serious eye infections.

The risk of microbial keratitis has been shown to be greater among users of extended wear contact lenses than among users of daily wear contact lenses.

Do not wear contact lenses if you are suffering from:

- Allergy, inflammation, infection or redness in or around the eye
- Dry eyes (inadequate tear fluid)
- Poor health affecting the eyes, e.g. colds and flu
- Any systemic illness affecting the eyes

Contact your eye care practitioner before wearing contact lenses when:

- Practicing water sports
- In excessively dry or dusty environments
- Using eye medication

If you experience any of the following problems, remove your lenses **immediately**:

- Eyes stinging, burning, itching, irritation or other eye pain
- Reduced comfort compared with previous wearing
- Unusual secretions or excessive watering from the eye
- Redness of eyes
- Severe or persistent dry eyes
- Reduced or blurred vision
- Rainbows or halos around lights
- Sensitivity to light

If any of these symptoms continue after removal, cleaning and reinsertion of the lens or insertion of a new lens, then remove the lens and **contact your eye care practitioner**. These symptoms can lead to more serious conditions if ignored.

Eye problems, including corneal ulcers, can develop rapidly and lead to loss of vision.
